Engineering – Procurement – Construction

SAP Extended ECM by Open Text

Boost Delivery and Quality

Boost Delivery and Quality - Document Control with SAP Extended ECM

Boundaries and Conditions

- Different codes & standards (partners, suppliers, customer)
- No common project design rules
- Local content (no qualified suppliers), worldwide sourcing
- No common plant structure (technical & cost scope)
- Complex business split (Division of work, division of responsibility)
- Lack of information exchange between engineering offices, partners, suppliers and customer
- Various engineering tools & information management systems across locations & disciplines
- Reduced cycle times, Late customer changes
>> concurrent engineering mandatory
- Worldwide engineering offices (high value engineering offices)
- Lack of competences (in-house, partners, suppliers)

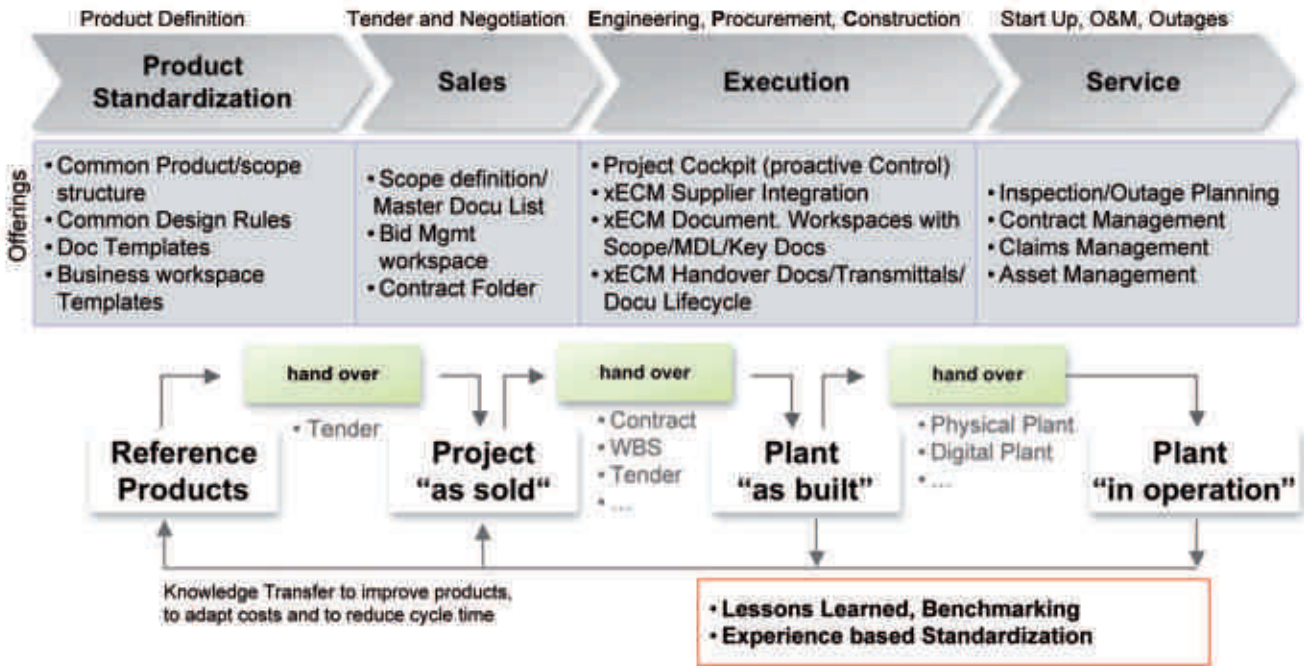

Vision

- Reduced Effort in tender/bid and project execution
- Reduced Cycle Time to execute projects
- Controlled proactive Cash In / Out to ensure positive cash flow
- Proactive Management of Change Orders and Claims
- Proactive Planning of resources in project and across projects

Our Consulting Approach

Our Consulting Approach

... to bring transparency and project control into the life cycle of your plant/product and help you to learn from and standardize your projects.

...Where Customers See Value
